

I'm not robot!

Let's dash all hope before we begin. You can't artificially boost your signal with an app. Most apps that claim to do so just toggle your mobile data or Wi-Fi on and off or some other super basic trick to reset the connection to the network. Basically, they are app versions of turning something off and back on again. However, there are apps out there that can help you identify problems to solve them more easily. There are various ways to fix such problems all on your own once you know what to look for. Here are the best mobile network booster apps for Android Price: Free / \$39.99-\$99.99 per yearGlassWire is a useful networking tool. It shows your device's connection and all of the data it both sends and receives. This is useful for folks with slow data speeds but decent signal strength because it can help root out apps that are abusing your data behind closed doors. It won't help diagnose actual signal strength problems, but if something is popping off and using constant data, it'll definitely manifest as slower speeds and inconsistent connections. We recommend starting here, and the free version lets you view the data usage of all of your apps. There are several IP Tools apps on the Play Store, but we chose this one for its cheap price tag and relatively good functionality. The app has a bunch of functions, including a port scanner, Wi-Fi scanner, a DNS lookup, an IP-host converter, and more. This is a bit more hardware than your general networking tools on mobile, but it can provide good insights into why your signal isn't performing as well as it should (on Wi-Fi, at least). The pro version is a single \$2.99 in-app purchase. Network Cell Info helps you find the nearest cell towers. The bad signal comes from a variety of factors. One of which may just be the distance from a tower. An app like this shows you where the towers are to see how far you are away. It should work on both GSM and CDMA carriers, and it supports dual-SIM as well. Some other features include signal measurements and a crowd-sourced signal finder. The pro version is \$1.49, and you need to unlock some of the features. Joe Hindy / Android AuthorityOpenSignal is a lot like Network Cell Info. It shows you the 3G, 4G/LTE, and 5G towers in your general vicinity. However, this one also works with Wi-Fi signals. Basically, if you can connect to it, OpenSignal can probably find it. This one works well for a variety of reasons. The best, though, is that it compares signal strength between the big three carriers in the US to see if maybe a different one has a better signal where you live. There is also a coverage map so you can see if maybe you just live in a weak zone on your carrier. There's a lot of good information here to help diagnose a signal problem, making it one of the better signal booster apps. There are a bunch of Wi-Fi Analyzers on mobile. We like this one because it's relatively easy to use, gets frequent updates, and works really well. The app not only shows you the Wi-Fi signal from your home but those from nearby homes as well. You can get a really good sense of the network congestion in your space with this app. From there, you can adjust your router settings to broadcast on less cluttered channels, and that may help your signal issues. This one supports 2.4Ghz and 5Ghz connections and a bunch of other stuff. Most modern routers are configurable via an app. Linksys, Netgear, TP-Link, and other OEMs have apps. These apps are beneficial because you can toggle and change various settings. For instance, I own an Asus router, and I use the app all the time. I can view things like system performance, make the router itself run a speed test (not over a wireless network), and change all kinds of settings like my DNS. Sometimes, routers come with less than ideal settings that you can change and help things out a bit. You may also want to consult forums and such to see what other people have done so you don't mess things up too badly. Get a signal booster from your mobile carrierVerizon knows how to hide their towers.Sometimes there is no fix, and you need some extra hardware. Most mobile carriers have an option for a signal booster. A signal booster is a piece of hardware you install in your house. The boosters work in two different ones. One type receives a signal from the OEM and boosts it to function properly in your house. The other type connects to your house's Internet and connects to carrier servers from there. All three major US carriers have them, and some of them do some unique stuff.Signal boosters are generally not too expensive, and a tech will install one if you don't have the know-how to do it yourself. The boxes should fix any weak signal issues inside of your home, but they obviously don't work when you're out and about. Below we have official signal boosters from the big three US OEMs, and they work a lot better than those fake signal booster apps in the Play Store. Dig around your settingsSometimes your phone has bad settings or settings that get in the way. For instance, my area currently has slightly spotty 5G coverage. I turn off 5G on my Samsung Galaxy S22 Ultra and it defaults to the much stronger, much more reliable 4G LTE network. This not only saves battery, but my upload and download speeds are more consistent. This is something you may be able to replicate. Many devices let you choose whether or not to connect to 5G or 4G LTE. Additionally, if you have both a 2.4Ghz and a 5Ghz Wi-Fi connection in your home, you may have mistakenly connected to the wrong one. This is extremely generic advice because devices have many independent settings. For instance, Samsung devices can download things over mobile data and Wi-Fi simultaneously to boost their performance. Moving away from a Samsung device to another device may make it seem like your connection is much worse when Samsung was really just using two connections at once.We recommend rooting around your Network settings and your Wi-Fi settings and seeing what you can see. Don't worry, you can't do any permanent damage, but take a screenshot of the way your settings were before you change anything in case you want to change back. Also, try rebooting your phone. Sometimes you just need to turn it off and back on again. See if your phone has signal issuesSome devices just have weaker antennas. It's not a thing too many people measure anymore, but it happens. Anecdotally, my ZTE Axon 7 had worse signal strength compared to my LG V20. Consequently, my former Samsung Galaxy Note 10+ had a stronger signal than my former LG V60 (by about one bar). The device's modem is attached to the SoC, so every phone with the same chipset uses the same modem. However, device design, antenna design, and other factors may simply make one phone worse at retrieving a signal than another. You can't do much about it if this happens to you outside of maybe upgrading to a different phone or using a signal booster from your mobile carrier. Usually, the differences in the signal aren't devastating, but if your signal wasn't great to begin with, a phone with natively worse reception might be the tipping point. Use your Wi-Fi when availableA common tactic is to simply avoid your mobile data unless you have to. Many devices these days let you make phone calls over Wi-Fi, and a lot of people can simply make calls over Facebook Messenger or a similar data-only service. By using Wi-Fi calling and avoiding your mobile network, it doesn't matter if your signal isn't great indoors because you're not using it anyway. Switch carriersEdgar Cervantes / Android AuthorityThere are people out there who have weak mobile signals with no easy solution. Maybe you live out in the middle of nowhere with hardly any cell towers from any mobile carrier. Maybe your house is constructed out of materials that block signal. People who spend a lot of time in basements really can't do much. Your best bet if none of the above works is to look for alternative options. Sure, that T-Mobile deal may have been sweet, but if T-Mobile doesn't have towers where you live, what's the point? This can happen with any carrier as some areas have weak support all around. Check out coverage maps of the carriers in your area to see if any of them have towers out there that may give you a better signal. If we missed any great signal booster apps for Android, tell us about them in the comments. You can also click here to check out our latest Android app and game lists. Nowadays, wifi signal is everywhere. No matter whether you are on the college campus, railway station, shopping mall, nearest pizza shop and the coffee shop or any other public places - you'll find wifi internet connectivity everywhere. One disadvantage of Wifi signal connectivity is that even if you go a very small distance away from Wifi hotspots locations, you'll find your Wifi signal strength lowering down. Having weak Wifi signal affect your internet connectivity. No matter whether you are just browsing the internet, listening music online, downloading or uploading something, streaming online movies or just going through your Facebook news feed - you'll certainly find the need to boost your wifi signal strength to improve internet connectivity over Wifi on smartphones/tablets, etc. Fortunately, there are some of the best Wifi booster app for Android that helps you do that. Using the free Wifi booster app, you may improve your smartphone's Wifi signal strength quickly. Simply, install free Wifi signal strength booster app for Android and start boosting Wifi signals easily. Read: Is Free Public Wifi Safe? - Ultimate Guide to Stay Safe on Free Public Wifi [Infographic] 15 Best Wifi Booster App for Android to Boost Wifi Signal Strength for Free If you search for "Wifi booster app for Android" in Google or "Wifi booster app" in Google Play Store, you'll get a massive list of Wifi signal booster app for Android. But not all of the provided Android wifi booster is free, and you might need to pay for premium Android signal booster app. But we have compiled a list of best free Wifi apps for Android for you so that you may boost Wifi signal on Android and make your internet connectivity more powerful thus making your smartphone more efficient even at a distant place from Wifi hotspots. 1. Wifi Signal Strength Wifi Signal Strength is yet another powerful Wifi app for Android that lets you optimize your Wifi signal strength in smartphone or tablets easily and quickly. Unlike other Android Wifi booster apps that boost your Wifi network signal on Android devices up to a certain limit, it lets you choose the best Wifi network with highest signal strength. Wifi Signal Strength is a simple Wifi tool for Android that allows you to view your current Wifi signal strength and keeps updating you with the Wifi signal strength of latest Wifi network you are connected with - no matter whichever Wifi hotspot you are connected to. Thus it makes you able to easily choose the best Wifi network with highest signal strength on Android. How to: Boost Your Smartphone Speed Instantly Using DU Speed Booster Free Android App 2. Wifi Easy Booster Wifi Easy Booster is another Android Wifi booster app that improves the speed of your wireless connection effectively. As compared to other best Wifi booster app for Android, it works on a slightly different mechanism of boosting Wifi speed on Android. Wifi Easy Booster is a powerful Wifi boosting app with a simple and easy user interface as after installing the app, you may tap on "Boost Now" button and wait until the boost processing finishes. In the meantime, Wifi Easy Booster disconnects from the currently connected network and re-establishes a fresh connection with the router. Thus this free Wifi booster app enhances your downloading/uploading, streaming or file transferring speed, etc. Check: 13+ Excellent Free Large File Sharing Tools to Send Large Files Online Securely 3. Internet Booster & Optimizer Internet Booster & Optimizer is another powerful Android Wifi booster app that improves your Wifi signal strength and optimizes your network speed to enhance your internet speed for faster browsing experience. It is one of the best internet speed booster app for Android which simply puts your browser's better speed its priority. No matter whether you are on Wifi signals or mobile data networks (2G, 3G, 4G, LTE), Internet Booster app for Android is a powerful internet speed accelerator that automatizes a series of commands and optimizations to put your browser on the top of priority on your Android system making sure you get the most out of your ISP internet speed. Read: Top 10 Best Android Games for Kids - Free Gaming Apps for Kids 4. Wifi Manager Wifi Manager is yet another best Wifi app for Android that works as all-in-one Wifi manager for Android. It lets you find nearby Wifi hotspot locations, connect to the best Wifi network and manage Wifi signals on Android. Wifi Manager app for Android automatically scans and discover open Wifi networks around you. It also shows various info like connection speed, strength, etc. about network through Wifi home widget. It has a geographical channel radar that improves connection quality of your network. Wifi Manager also switches between fixed and dynamic IP address thus boosting signal strength. Read: Top 7 Free SMS Sites to Send Anonymous SMS from Fake Numbers to Frank Your Friends 5. Open Signal Wifi Map. Speed Test If you are looking for one of the best Wifi apps for Android that allow you to find Wifi hotspot location around you as well as improve your network quality by boosting signal strength on Android then Open Signal Wifi Map. Speed test is the Android Wifi signal booster app you are looking for. It helps you to map cellular coverage, find Wi-Fi hotspots, test and improve your reception & get faster data for better Wifi signal speed on Android. Open Signal Wifi Map has a powerful signal compass that points you in the direction your signal is coming from, just walk towards it, and you'll be able to find best Wifi network in your location and connect to it. Check: Top 10 Best Mp3 Music Downloader Android Apps for Free Music 6. Wifi Analyzer Wifi Analyzer is yet another powerful Android signal booster app that turns your Android phone/tablet into a Wifi Analyzer. It helps you trace, locate and find the best Wifi hotspot channels around you thus allowing you to choose the Wifi network of highest strength. Wifi Analyzer app for Android is a powerful Android Wifi app that makes you able to find a less crowded Wifi channel for your Wireless router easily. It is free and quite easy to use due to its simple user interface. Read: Top 5 Best Offline Dictionary Apps for Android Users 7. Network Signal Info As the name suggests, Network Signal Info app for Android provides detailed information about network signal on Android devices. It scans your current Wifi network and fetches various information about the network signal you are connected to - no matter the network signal is Wireless Wifi or cellular mobile connection. Network Signal Info app is not an Android Wifi booster app as it doesn't boost your Android device's Wifi signal strength rather it helps you identify the most powerful network connection nearby you. Thus, it ultimately helps you avoid poor network and choose the network of highest signal strength. Check: Top 20 Best Free Android VPN Apps to Browse Securely & Anonymously 8. Wifi Overview 360 Wifi Overview 360 is yet another Android Wifi app that works quite similar to Network Signal Info app for Android. Wifi Overview 360 is a WLAN Scanner app for Android that scans and shows all WLANs in your range. It is a very powerful Wifi tool for Android that helps you manage and optimize your used wireless network as it provides you detailed information of the WLANs (WLAN name (SSID), signal strength, channel number, encryption - open or not) around you. It has a powerful channel checker that helps you choose the best Wifi network signal on Android. Check: Top 125+ Best Free Proxy Sites with Free Proxy Servers 9. Wifi Radar Wifi Radar uses your device's digital compass to determine the location of all nearby networks. The Wifi Radar app is another useful Wifi app for Android. It displays the physical location of wireless networks making you able to find and locate the Wifi hotspot locations around you. Wifi Radar has signal strength graph analyzer that analyzes signals, and the channel analyzer finds the best Wifi channel your access point. Wifi Radar is one of the best Wifi booster app for Android as it helps you choose the Wifi networks of better strength nearby you. Read: Top 10 Free Movie Apps for Android to Watch Free Movie on Android Smartphones 10. Wifi Signal Booster + Extender If you are worried about your poor wifi signal strength, then Wifi Signal Booster can boost Wifi signal up to a certain percentage to help you get better Wifi signals for higher internet speed. Wifi Signal Booster is one of the best Wifi booster app for Android that improves your Wifi signals for better internet speed on your Android device. Wifi Signal Booster app for Android optimizes wireless module and improves the efficiency of Wireless network up to a certain percentage thus improving signal stability and increasing Wifi signal strength. So just install and boost your Wifi signal for free with the best Android Wifi booster App. 11. Wifi Speed Booster If you are using the highest package of the internet but still not satisfied with the speed of the network, then Wifi Speed Booster for Android can help you. Wifi Speed Booster is yet another free Wifi app for Android that helps you speed up internet effectively up to 2 times faster by boosting Wifi strength. When you close an application on Android after using, it keeps consuming data even if you know it is closed. So Wifi Speed Booster simply scans and analyses such apps and then disables those application to boost Wifi internet speed in Android instantly. So just download Wifi Speed Booster app for Android and start boosting Wifi speed for free. How to: Make Free Calls on any Mobile or Landline Users Even in 2G with Nano Free Android App Minutes Other Useful Free Wifi Apps for Android 12. Wifi Booster Easy Connect Wifi Booster Easy Connect helps you automatically connect to open Wifi networks your Android device comes across easily. 13. Wifi Connect Wifi Connect is another cool Wifi booster app for Android. It searches for the best Wi-Fi frequency, signal strength and Wi-Fi channel. Thus, helping you manage Wifi connection by looking at the best signal level, signal strength. It displays Wifi detail by frequency and channel or Wifi signal by Graph.
